OUR SOLUTIONS

PURE™ Supply Chain

PURE Supply Chain empowers organizations to improve transparency throughout their supply chains and build operational resiliency. Bring suppliers on board and engage with them through questionnaires, codes of conducts, and audits to manage performance and ensure compliance.

FEATURES

- Assess, audit and manage suppliers
- Collect a variety of information from suppliers, from codes of conduct surveys to environmental performance metrics
- Significantly reduce the cost and complexity of collecting information from large and dynamic supply chains
- Identify risk in the supply chain and manage corrective actions
- Integrate multiple data sources to maintain a centralized, single point of truth
- Summarize supplier performance and risks with intuitive dashboards

PURE™ Sustainability

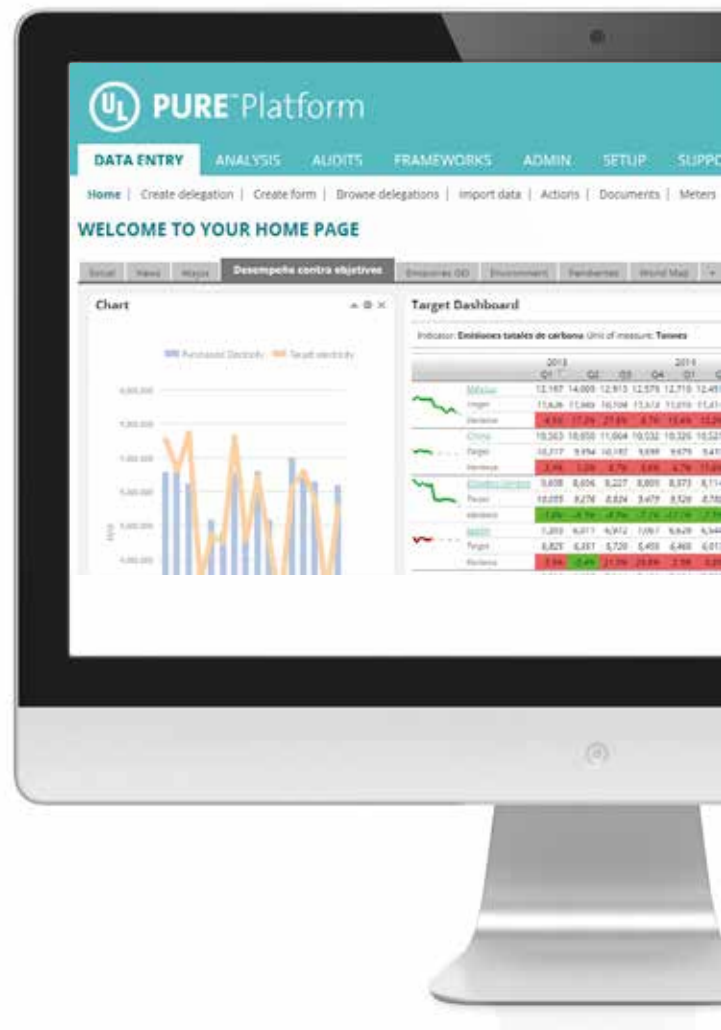

PURE Sustainability allows companies to meet internal and external reporting needs and engage with stakeholders by bringing together complex organizational data in a powerful platform.

Collect reliable data across your whole organization by collecting data centrally or from locations and colleagues worldwide. Gather and analyze data for annual CSR & Sustainability reports and meet a range of external requirements including the CDP, GRI, and DJSI.

Gather data from across your business, calculate your emissions across Scopes 1, 2 and 3 using established protocols and GHG conversion factors, and create performance reports and dashboards.

FEATURES

- Consolidate information for ongoing performance management, external disclosure, and strategic decision-making
- Report in-line with frameworks such as CDP, GRI, DJSI, SASB and UN Global Compact
- Simplify data collection with an intuitive and user-friendly system
- Ensure reliable information with quality checks on data
- Support external assurance for reporting with a full audit trail
- Use flexible reporting tools such as customizable charts, tables and dashboards
- Undertake real-time meter data and management
- Streamline GHG calculations
- Integrate with ENERGY STAR, Urjanet and GRESB

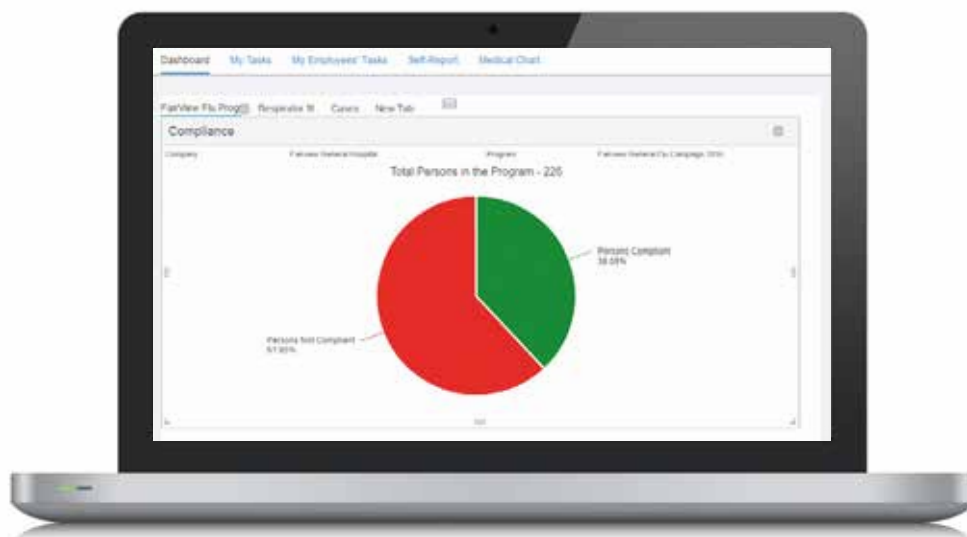

PURE™ Health

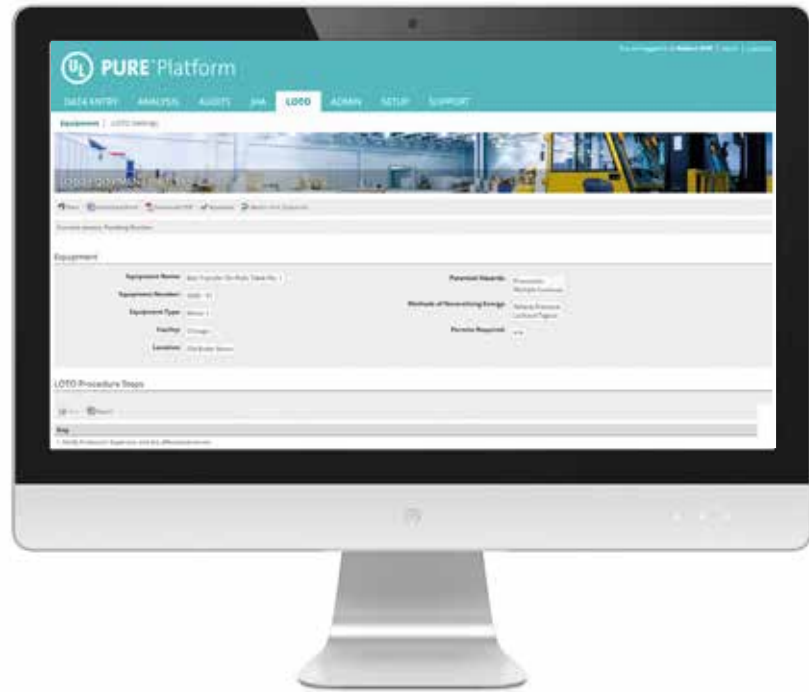

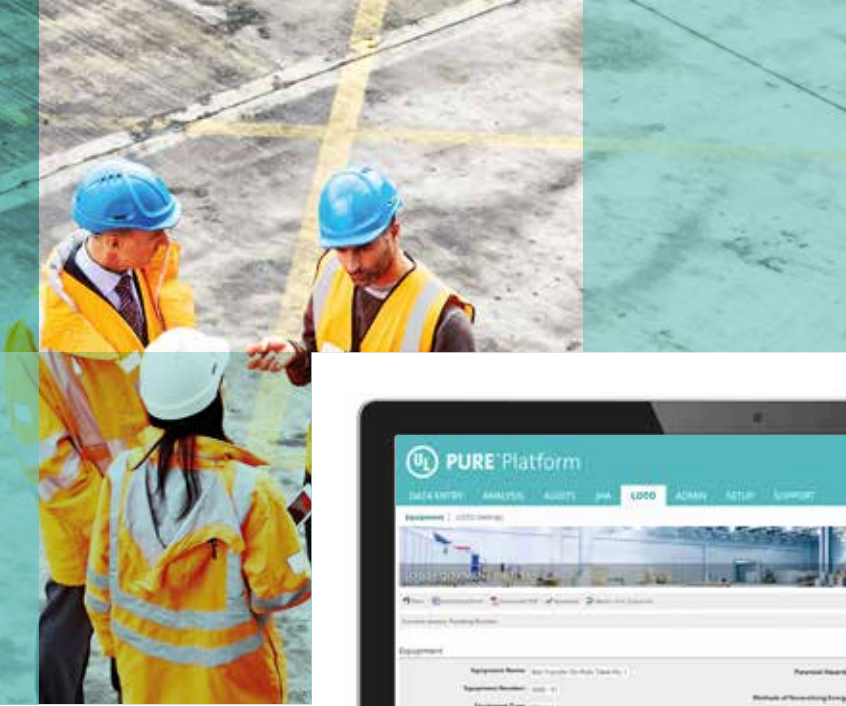

Employee health and wellness is a business imperative, with significant benefits for employees as well as the company's bottom line. PURE Health's comprehensive health software solutions enable you to identify and proactively address problem areas and risks, reduce costs, and coordinate with payer and provider groups. Drive efficiency and cost savings in key areas, while freeing your employees' time to focus on patients.

FEATURES

- Medical Surveillance - include scheduling and monitoring, automated email notification, built-in graphs, and seamless interface with leading instruments and labs
- Integrated Workflow – Easily manage day-to-day medical surveillances, clinical encounters, and regulatory requirements, and automate required reporting. Built-in guidelines for case management help establish return-to-work timelines
- Adaptability – Accessible anywhere with an internet connection and designed to work on any device
- Information Security – For SaaS clients, data is held securely and offsite, within the highest standards

PURE™ Safety

PURE Safety provides a central platform to manage operational risk management activities, log incidents, manage corrective actions, analyze root causes, and meet and comply with reporting requirements such as from OSHA and RIDDOR.

Our solution allows you to go beyond compliance to help you prevent future incidents by acting on the data you collect and gaining insight into underlying trends. Safety data is vital to important to gather, interpret, and act on to drive operational excellence and protect workers.

FEATURES

- Centralized data collection – single online platform for data collection and consolidation, integrates observation, incident management, prevention, and training to centralize and simplify safety training and compliance programs. Simplify incident management and support employee training from start to finish, and can be done from any location on any device
- Mobility – native mobile apps to support auditing and observation/near miss reporting
- Consolidation in reporting – metrics from multiple modules/functions automatically updated in a central dashboard and available to all reporting tools in isolation or combination
- Flexibility –streamlined tracking, reporting and recordkeeping, supported by online safety training courses and industry-leading delivery and management options

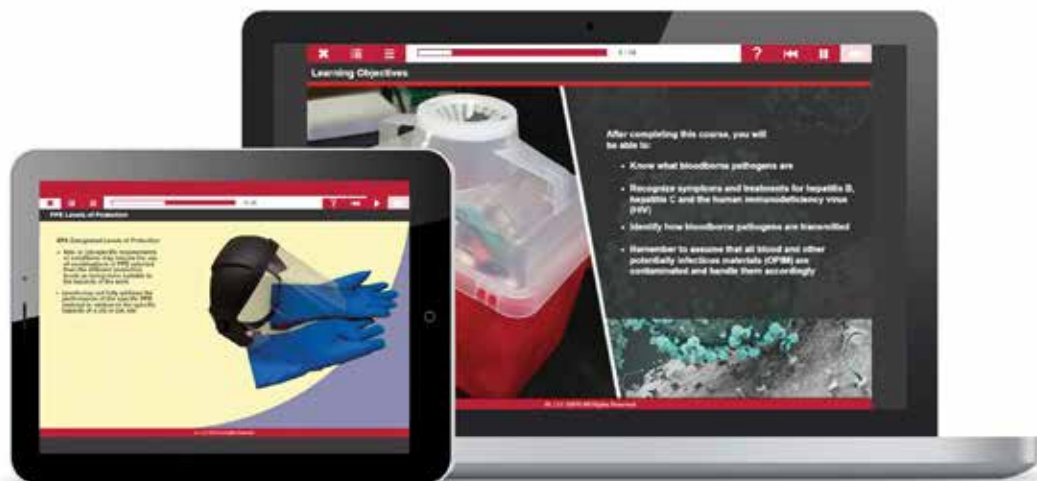

PURE™ Learning

Creating the safest conditions for your employees is more than just doing what's required; it takes a commitment. Companies with safety training programs that incorporate online learning need to ensure that their content is high-quality, reliable, measurable, and conforms to global leading practices in environmental health and safety.

PURE Learning solutions are uniquely designed to help you meet this obligation with our extensive, up-to-date library of more than 900 environmental, health, and safety online courses. Select courses from our library, customize existing courseware, or let us create new content to meet your unique company objectives.

FEATURES

- High-quality - Courses are designed by UL's team of EHS subject matter experts and adult learning specialists
- Customizable – All training can be created or tailored to any company's culture by using photos, work standards, and specific protocols which makes learning stick
- Accessible - Employees can access or manage training 24/7 from any web-enabled device. Challenging learning activities, knowledge checks, and post-tests help reinforce and evaluate employee knowledge
- Up-To-Date – The library is regularly updated. Courses are AICC and SCORM compliant, certified to run on leading learning platforms, and built in HTML5, which allows more flexibility and portability on a variety of mobile devices

PURE™ Environment

The PURE Environment solution manages all aspects of your environmental program to automate reporting, ensure regulatory compliance, and reduce impacts, risk, and costs.

PURE Environment is the market's leading environmental ERP system helping companies worldwide manage regulatory compliance, GHG emissions, environmental audits and incidents. With numerous and evolving EHS regulations as a key challenge for EHS teams, the solution is underpinned by the Compliance module. It builds a legal register and manages ongoing actions, to provide site-level insights and an organisational view on regulatory compliance. PURE Environment meets the evolving business need to measure, manage, report on, and mitigate a company's impact on the environment, providing a comprehensive understanding of environmental performance within your centralized compliance system.

FEATURES

- Achieve Regulatory Compliance – The Compliance Module helps you develop a global view of the legal register while drilling down to investigate non-compliances at sites.
- Automate Reporting – The GHG Module saves you time and increases quality by automatically calculating operational impacts from live activity data using any key GHG standard.
- Identify Environmental Risk – The Incidents module helps you manage corrective actions, identify risk areas, and take steps to mitigate risk.
- Increase Savings and Reduce Inefficiencies –The Properties Dashboard allows you to benchmark sites' performance to find top and bottom performers and measure progress against targets.

ADVISORY SERVICES

Our Advisory Services Team seeks to partner with organizations to provide trusted subject matter expertise, support for organizational change, execution of practical action plans, and implementation of measurable and lasting improvements across an organization's global operations and its supply chain. Our mission is to help our clients drive operational excellence and reduce risk through integrated health & safety and sustainability practices and solutions.

Coupled with best-in-class reporting tools from across the PURE™ Platform, the value of the strategic programs constructed by the Advisory Services Team can be validated through observed improvements and benchmarked against other leading companies and competitors.

By driving operational excellence through enhanced EHS & sustainability practices and strategies, companies are able to realize quantifiable benefits to their business operations, revenue and costs, and brand recognition.

Benefits include:

- Revenue growth
- Reduction of costs
- Mitigation of risks and compliance fines
- Brand enhancement and awareness in the marketplace
- Supply chain transparency and resiliency

OUR CLIENTS

More than 2,000 companies in more than 20 industries trust UL's PURE™ software solutions to help them improve business performance and manage operational risk.
