

PURE™ Supply Chain

AUDITS MODULE

Schedule, Manage, and Record Your Supplier Audits

Supplier audits are necessary to validate supplier claims and ensure compliance against a range of environmental and safety management requirements. Supplier site audits can validate whether corporate level commitments are being adhered to at the site level and can reduce risks created through bad practice and non-compliance. The Audits module can be used for managing site audits for supplier facilities as well as conducting internal audits.

KEY BENEFITS & FEATURES

- **Entering Audit Data** – Details are logged in the system using intuitive online forms. The forms are configured to collect the data you require and can incorporate multiple questionnaire sets for different types of audit.
- **Managing Non-Compliance** – If an audit identifies non-compliances, corrective actions can be raised and assigned to specific individuals with resolution dates.
- **Supplier Scoring** – Maintain a system of record of supplier KPIs, performance, and compliance so to analyze risks and make more informed supplier management decisions.
